

**Efficiency. Delivered.**

## Henry Schein Website Inventory Management System

Henry Schein’s Website Inventory Management System delivers automation of inventory management processes including the set up and maintenance of par levels (min/max), suggested orders, and critical business data reporting.

Feature	Benefit
Automatic or Manual Inventory Set Up & Maintenance	System will automatically set up Min, Max, Quantity on Hand (QOH) values
Inventory Adjustments – Increment and Decrement	Automatic, manual, and barcode scanner adjustment options
Order Automation via Suggested Orders	Scheduled and real-time suggested orders
Inventory Reports and Order Processing Savings Calculator	Asset valuation and order frequency savings

The Henry Schein Website Inventory Management System will help identify expiring products and allow for the assignment and tracking of costs by General Ledger (G/L) code, specialty, department, or any other user-defined data points. Organizational supply chain benefits include:

### Standardization Measures

- Management of inventory workflow
- Supply chain process compliance

### Optimization of Inventory Levels

- Avoid expiring products
- Avoid emergency ordering or over stock

### Automated Operational Efficiencies

- Delivers time savings and simplification
- Minimizes ordering, receiving and stocking events
